

Capital Efficiency / RWA Optimisation

Model capital released through IRB migration, collateral optimisation, securitisation, and portfolio density improvement. Built for bank CFOs, CROs, and treasury heads navigating Basel III endgame in the GCC.

7. Scoreboard & GCC Benchmarks

1. Executive Summary

Capital efficiency is the defining strategic lever for GCC banks navigating Basel III endgame. This accelerator provides a structured framework across four optimisation pathways to model capital release, estimate ROE uplift, and benchmark against regional peers. Each pathway includes calculation templates and implementation guidance.

2. IRB Migration & Model Sophistication

Moving from standardised to foundation or advanced IRB typically reduces credit-risk RWA by 15-35%. The magnitude depends on portfolio composition, data maturity, and regulatory approval timelines.

Migration Pathway Comparison

Approach	Typical RWA Reduction	Data Requirements	Approval Timeline
Standardised to Foundation IRB	15-20%	5+ years PD history, validated models	12-18 months
Foundation IRB to Advanced IRB	10-15% incremental	7+ years LGD/EAD history, granular data	18-24 months
Standardised to Advanced IRB	25-35%	Full internal model suite, extensive data	24-36 months

Implementation Considerations

Data Readiness: IRB approval requires demonstrably clean, complete, and validated historical data. Most GCC banks need 12-18 months of data remediation before application. **Model Governance:** SAMA expects robust model risk management frameworks aligned with SR 11-7 principles. **Regulatory Engagement:** Early and continuous dialogue with SAMA is critical. Parallel running periods typically span 6-12 months.

3. Collateral Optimisation

Recognising eligible collateral currently unrecognised under regulatory frameworks can release significant capital. The gap between economic collateral value and regulatory recognition is typically 20-40% for GCC banks.

Eligible Collateral Types

Collateral Type	Regulatory Haircut	Typical Coverage Gap	RWA Impact
-----------------	--------------------	----------------------	------------

Cash & Government Securities	0-5%	Low (5-10%)	High
Listed Equities	20-40%	Medium (15-25%)	Medium
Real Estate (Commercial)	40-60%	High (25-40%)	Medium
Guarantees (Sovereign/Bank)	0-20%	Medium (10-20%)	High
Receivables	40-60%	High (30-50%)	Low-Medium

Optimisation Checklist

- Complete collateral inventory with regulatory eligibility mapping
- Valuation frequency aligned with Basel requirements
- Legal enforceability opinions current for all jurisdictions
- Haircut methodology documented and validated
- Cross-border collateral recognition assessed
- Netting agreements reviewed and updated

4. Securitisation & Balance Sheet Recycling

Significant risk transfer (SRT) via securitisation of mortgage or loan books can dramatically reduce on-balance-sheet RWA while retaining servicing economics. GCC sukuk structures offer Sharia-compliant pathways.

SRT Structure Comparison

Structure	RWA Benefit	Complexity	Market Depth (GCC)
Synthetic Securitisation	60-80% RWA reduction on ref pool	High	Emerging
True Sale Securitisation	Full derecognition possible	Medium-High	Moderate
Covered Bonds / Sukuk	Lower risk weight on retained	Medium	Growing
Sub-participation	Partial risk transfer	Low-Medium	Established

Key Considerations

SAMA Approval: SRT transactions require prior supervisory approval with full documentation of risk transfer.
Sharia Compliance: Structures must satisfy Sharia board requirements for asset-backed instruments.

Investor Base: GCC investor appetite for structured products is growing but still developing compared to European markets.

5. Portfolio Risk-Weight Optimisation

Systematic portfolio rebalancing, exposure netting, and guarantee restructuring to reduce average risk-weight density across the book. Typical density improvements of 1-5% are achievable.

Optimisation Levers

Exposure Netting: Consolidate bilateral exposures to reduce gross RWA. Requires enforceable netting agreements. **Guarantee Substitution:** Replace higher-risk-weight exposures with guaranteed equivalents (sovereign, multilateral). **Portfolio Rebalancing:** Shift asset mix toward lower risk-weight categories while maintaining return targets. **CRM Techniques:** Credit risk mitigation through funded and unfunded protection, credit derivatives.

Risk-Weight Density Template

Asset Class	Current Density	Target Density	Actions
Corporate (Investment Grade)	75-100%	50-75%	IRB migration, collateral recognition
Retail Mortgages	35-75%	20-35%	Securitisation, LTV improvement
SME	75-100%	50-75%	Guarantee programmes, data improvement
Sovereign / PSE	0-20%	0-10%	Rating upgrade, ECAI alignment
Interbank	20-50%	20-35%	Netting, collateral posting

6. Capital Release Estimation Framework

Calculation Template

Use this template to estimate total capital release across all four pathways:

Pathway	Input	Formula	Estimated Release
IRB Migration	Current RWA, migration factor	$RWA \times (\text{target factor} - \text{current factor})$	[Calculate]
Collateral	Unrecognised collateral, gap %, haircut	$\text{Collateral} \times \text{gap} \times \text{haircut}$	[Calculate]

Securitisation	Eligible book, current RW, target RW	Book x (current RW - target RW)	[Calculate]
Portfolio Density	Total RWA, density improvement %	RWA x density improvement	[Calculate]
Total			[Sum]

ROE Impact Estimation

Rule of thumb: Each SAR 1B of released capital translates to approximately 0.8% ROE uplift (assuming 12.5% CAR and current net income margins). **AT1 Sukuk equivalent:** Released capital reduces the need for expensive AT1 instruments. Each SAR 1B of capital release saves approximately SAR 150M in AT1 sukuk equivalent.

7. Scoreboard & GCC Benchmarks

GCC Banking Capital Release Benchmarks

Scenario	Capital Released (SAR B)	ROE Impact	Typical Profile
Conservative	0.5	+0.4%	Single pathway, standardised approach
Base Case	2.5	+2.0%	Two pathways, foundation IRB
Aggressive	5.3	+4.2%	All four pathways, advanced IRB

Note: These benchmarks are based on analysis of GCC Tier 1 banks with total assets of SAR 200-500B. Actual results will vary based on portfolio composition, regulatory approval timelines, and market conditions.

Next Steps

This guide is designed to be a practical, hands-on resource for implementation. Use the templates and checklists as starting points for your organization's specific needs.
